

***Don't be a part of the problem
– be a part of the solution!***

10 easy ways to an environmentally adjusted office

- Think before making unnecessary print outs.
- Use both sides of the paper when printing.
- Recycle paper.
- Switch off lights in empty rooms.
- Switch off computers at the end of the working day.
- Switch off mobile chargers when not in use.
- Change to low energy light bulbs.
- Sort waste material carefully.
- Ensure office-appliances energy-saving functions are switched on.
- Collect all empty cassettes, ink-jet cartridges and worn out electrical and electronic appliances for recycling.
- Allow Rahmqvist quality products be your natural choice.

RAHMQVIST GREEN PAGES

Our customers make good choices for the future!

Our statement for a greener, healthier, planet.

We are committed to combine our responsibility to run and develop a profitable company with our responsibility to hand over a world in balance to our children, grandchildren and the generations after them.

We are now making decisions for the future – what we are doing to the environment will sooner or later strike back on ourselves. It's all about common sense, choices and consequences!

Our product philosophy

One step towards a reduced climate- and environmental impact is to consume less. Therefore the Rahmqvist product line focus on long-life high quality products. Products that might not be the cheapest to buy, but will be economical for the customer in the long run.

Careful thinking through the entire process

As the sole enterprise in our branch that has a certified quality- and environmental product development process we constantly make demands on:

- our producers and suppliers
- quality and function
- products durability and recycling potential
- packaging
- materials and compositions
- transports and climate impact

Produce and influence

Close and long-term relations with our suppliers, some since the 1950's, create confidence and give us possibility to influence the production. Together with our producer we search for creative solutions – to the benefit of our customer – in the interest of the environment.

What does the eco label mean?

We want to guide our customers to green product choices by eco labeling products in our assortments.

The swan – official eco label of the Nordic countries

Bra Miljöval

Good environmental choice - the eco label of the Swedish Society for Nature Conservation

The above eco labels are official and voluntary schemes which cover a chosen range of products. Their criteria are based on the product's impact on the environment throughout its life-cycle. Only the very best products, which after verification meet tough environmental and quality standards, are awarded these eco labels.

FSC – Forest Stewardship Council

This international organization has developed the 10 principles and 56 criteria that form the basis for the FSC forest management standards defining how forests have to be managed to meet social, economic, ecological, cultural and spiritual needs of present and future generations. We put the FSC label on paper products originating from FSC certified forests.

The Rahmqvist Green Choice

Our own eco label on products for which no official eco label criteria is available. This symbol aims to communicate to our customers that we made efforts to change a material, substance or something else to make a product more environmental friendly. The symbol is always followed by reason justifying the eco label.

Some examples on our environmental work

- Unique quality products that function until they wear out.
- Reduced climate impact through logistics and co-ordination of goods transport.
- Thrift and recycling within our own administrations.
- Inspire co-workers, suppliers and customers to be a part of the solution.
